Primary Examiner, Art Unit 2625

***Reasons for Allowance***

1. Claims 1, 34, 36 and 38 are canceled.
2. Claims 2-33, 35, 37 and 39 are allowed.
3. This is examiner's statement of reasons for allowance.

Regarding claims 7, 2-4, 6, 12 and 13, the prior art, either singularly or in combination, does not teach or suggest an optical encoder, comprising:

a light emitting unit that emits parallel light onto a plurality of marks that are arranged on an object at a predetermined interval in a moving direction of the object; and  
a light receiving unit that receives light modulated by the marks, wherein  
a width, along the moving direction of the object, of the light emitted from the light emitting unit is shorter than the predetermined interval.

Regarding claims 8, 5 and 11, the prior art, either singularly or in combination, does not teach or suggest an optical encoder, comprising:

a light emitting unit that emits light onto a plurality of marks that are arranged on an object at a predetermined interval in a moving direction of the object; and  
a light receiving unit that receives light modulated by the marks, wherein a cross-sectional shape of the light emitted from the light emitting unit has a longer width in a direction perpendicular to the moving direction of the object.

Regarding claims 9 and 10, the prior art, either singularly or in combination, does not teach or suggest an optical encoder, comprising:

a light emitting unit that emits parallel light onto a plurality of marks that are arranged on an object at a predetermined interval in a moving direction of the object; and

a light receiving unit that receives light modulated by the marks, wherein the light emitting unit emits a plurality of beams so that an interval between the beams at a surface of the object is an integer times the predetermined interval.

Regarding claims 14-33, 35 and 37 the prior art, either singularly or in combination, does not teach or suggest an optical encoder, comprising:

a slit member that has an aperture whose width is approximately equal to the predetermined interval, the light emitted from the light emitting unit passing through the aperture;

a gap holding member that holds the slit member so that there is substantially a constant gap between the slit member and the marks; and

a pressing member to elastically press the slit member against the marks through the gap holding member.

Regarding claim 39 the prior art, either singularly or in combination, does not teach or suggest a method of driving a motor to move an object on which a plurality of marks are arranged at a predetermined interval in a moving direction of the object, the method comprising:

pressing a slit member against the marks so that there is substantially a constant gap between the slit member and the marks, the slit member having an aperture;

emitting parallel light onto the marks so that the light passes through the aperture; converting light modulated by the marks into an electric signal; and

controlling the motor based on the electric signal.

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
